Exploring the usage of Puzzlemaker.com

Overview

My lesson is basic on introducing an excellent website that will provide a great aid for creating variety of different worksheets. I have also included several examples of worksheets that I use in my classroom for extra credit. You may come up with 10 questions of your own and cut and copy them to the worksheet.

Enduring Results

Technological Literacy Standards and Benchmarks

1. **A.8.7** Discover that human will or desire can lead to the design of new technology in order to seize an opportunity or solve a problem.

Objectives

1. Students will be able to get additional repetition on the vocabulary and module.

Teacher Preparation

Teacher must have additional questions that are important for the students to understand before completing the unit.

Content Outline

- A. Teacher must have questions that are fill-in-the-blank form.
- B. Open up www.Puzzlemaker.com on the Internet.
- C. Select Word Find from the drop down menu
- D. Follow the directions in completing the upper portion of worksheet.
- E. Copy and Paste the questions and word bank.

Activities / Case Studies

My lesson is to inform other teachers how quick and easy it is to use puzzlemaker.com and provide examples that I use in my classroom. I teach 7th and 8th grade exploration module classes. During post-test days, students usually have an extra 10 minutes that I use for extra credit. I have provided examples to look at.

Assessment

These activities are provided to students who need additional practice with the vocabulary for enrichment.

Resources

Computer, paper and the web site www.puzzlemaker.com

About the Author

I graduated from UW-Stout in May of 2000. In the fall of 2000, I accepted a Tech Ed. position at Edison Middle School in Janesville, Wisconsin. My position includes teaching 7th grade nine week required courses and 8th grade one semester elective classes. I graduated from National-Louis University with a Master's Degree in Interdisciplinary Curriculum and Instruction. I am completing my fifth year of teaching at Edison. Other responsibilities include technology education department leader, coaching golf, and coaching basketball

1. CAD is an acronym for computer-aided design.

2. <u>AutoCAD</u> was the software developed in 1982 that became the national standard for computer-aided design.

3. 0.0 is the location where the X and Y axes meet.

- 4. The distance along the \underline{X} axis is always written or said first when indicating a measurement.
- 5. The basic purpose of a(n) engineering drawing is to convey the exact shape and dimensions of the object represented.
- 6. If you were to draw a dot at each of the units along the X and Y axes, you would eventually draw a series of equally spaced dots called a(n) grid.
- 7. To give a location of a point on the X and Y axes is to give its coordinates.
- 8. In 1963, MIT developed a program that could draw pictures on a computer screen
- 9. In a coordinate system, the vertical and horizontal lines are called axes.
- 10. The cursor is an arrow which appears somewhere on the screen.

- 1. The pilot controls the aircraft from the cockpit.
- 2. As the pilot lowers the nose of the airplane to land he/she watches the <u>altitude indicator</u> to assist him/her.
- 3. Landing is the most difficult and dangerous part of flying.
- 4. During straight and level flight the altimeter should hold steady.
- 5. The altimeter tells the pilot how high the airplane is.
- 6. The wings on most airplanes are as long as the <u>fuselage</u>.
- 7. The yoke of an aircraft is similar to a steering wheel.
- 8. The aircraft's speed is controlled by the throttle.
- 9. When taxiing the pilot steers the plane with the rudder pedals.
- 10. The two control surfaces on the tail are the elevator and the rudder.

Hour

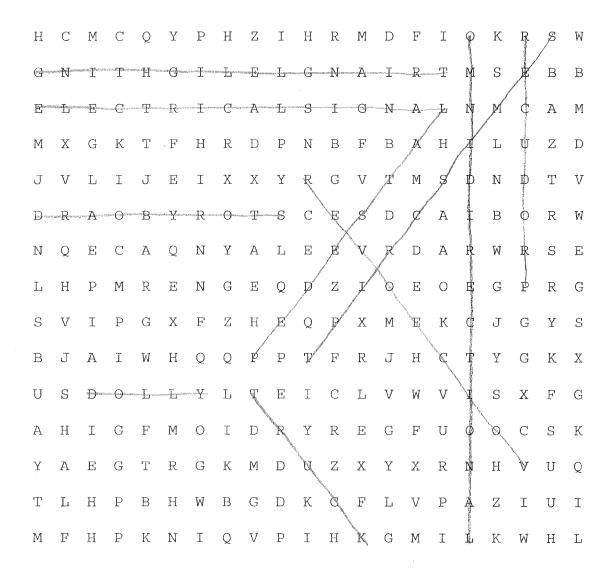

- 1. An advantage of computer-controlled, industrial robots is that they can be reprogrammed to do different jobs.
- 2. The Industrial Revolution started in England.
- 3. A knowledge of computers is necessary for a career in automation and robotics.
- 4. The invention of the transistor by <u>Bell Laboratories</u> greatly reduced the size of electronic equipment.
- 5. In 1801, on e of the first machines programmed with punched paper tape was (the) automatic weaving loom.
- 6. Henry Ford innovated the assembly line.
- 7. A <u>controller</u> is used to program some robots.
- 8. Hard automation refers to heavy machinery.
- 9. Setting a starting point is called <u>initialization</u>.
- 10. The <u>editing</u> capabilities of programmed robots allow change and make the robot adaptable to future industrial needs.

- 1. A hand-held microphone is omni-directional.
- 2. To move the camera toward or away from an object in a straight line by pushing or pulling the entire dolly is known as a <u>dolly</u>.
- 3. A <u>storyboard</u> shows the basic video images along with the sound information that will be shot during production.
- 4. <u>Triangle lighting</u> is the most common lighting technique used in indoor studios to achieve a three-dimensional effect.
- 5. A microphone picks up sound waves and converts them to a(n) electrical signal.
- 6. The voice of someone who does not appear in a shot is known as a voice over.
- 7. An interview is usually semi-scripted.
- 8. A(n) <u>producer</u> oversees the entire video production.
- 9. Moving the entire camera dolly left or right is known as a truck.
- 10. The camera movement which raises or lowers the camera by using the height adjustment on the tripod is a pedestal.
